

## Project definitions

- **New Method 4** : Use original gcro project shapes
- **Constructed** : descriptions with “current,” “complete,” or “implementation” (171 shapes)
- **Unconstructed** : with “planning,” “uncertain,” “proposed,” “investigating,” “future” (145 shapes)
- **Unclassified** (326 shapes)
  - “(informal)” (68 shapes) : these are scattered around the constructed/unconstructed projects; however, from googling shape names, it looks like these shapes are mainly just to locate informal settlements rather than identify informal upgrading projects
  - The rest of the unclassified shapes are predominantly concentrated in the north (see map below, sorry for the upside down legend); from googling, its hard to distinguish constructed from unconstructed projects here so I think we just have to leave them out (they are also former township areas that received a lot of different strange projects over the years, check out Winterveld if you’re interested) ; Another way to spin it is to say that we are just focusing on the Johannesburg Metro Area (the largest metro area in South Africa!)
- **Overlapping shapes** : most of the overlap is with unclassified shapes anyways (which are left out); in other cases of overlap, the approach links each outcome to its nearest shape. This process eliminates any shapes that are fully overlapped by other shapes, which gets rid of 5 constructed shapes and 6 unconstructed shapes.

- Pink : Unconstructed
- Blue : Constructed
- Orange : Not included (unclassified)
