Project definitions

- **Original**

  - classify shapes with RDP houses as Constructed (otherwise Unconstructed)
    RDP houses:

    * government in the seller name (and price filter)
    * do not have BBLU structure in the pre-period
    * median sale year after 2002

  - keep only ones that fuzzy merge with budget dates

- **New Method 1**

  - classify shapes with RDP houses as Constructed (otherwise Unconstructed)
    RDP houses:

    * government in the seller name (with a couple more government name definitions from a careful read of seller names and project names) (and price filter)
    * (no bblu condition)
    * median sale year after 2001

  - (use fuzzy merge with budget dates only for price regs)

- **New Method 2**

  - Same as New Method 1 except shapes with area less than 0.5 km2 are excluded

- **New Method 3**

  - classify shapes with project descriptions with any of these words [current, complete, implementation] as Constructed

  - and shapes with any of these words as [planning, uncertain, proposed, investigating, future] as Unconstructed

  - Note: this approach merges overlapping project descriptions to the union of shapes (397)

    * alternative future approach: just use the initial set of gcro (600+) shapes and their project descriptions
